Contents

Preface	vii
1 A Voyage of Discovery	1
1.1 Physics of the ocean	1
1.2 Goals	2
1.3 Organization	3
1.4 The Big Picture	3
1.5 Further Reading	4
2 The Historical Setting	7
2.1 Definitions	8
2.2 Eras of Oceanographic Exploration	8
2.3 Milestones in the Understanding of the Ocean	11
2.4 Evolution of some Theoretical Ideas	15
2.5 The Role of Observations in Oceanography	16
2.6 Important Concepts	19
3 The Physical Setting	21
3.1 Oceans and Seas	22
3.2 Dimensions of the Oceans	24
3.3 Sea-Floor Features	25
3.4 Measuring the Depth of the Ocean	27
3.5 Sea Floor Charts and Data Sets	34
3.6 Sound in the Ocean	35
3.7 Important Concepts	37
4 Atmospheric Influences	39
4.1 The Earth in Space	39
4.2 Atmospheric Wind Systems	41
4.3 The Planetary Boundary Layer	43
4.4 Measurement of Wind	43
4.5 Wind Stress	48
4.6 Important Concepts	49

5	The Oceanic Heat Budget	51
5.1	The Oceanic Heat Budget	51
5.2	Heat-Budget Terms	53
5.3	Direct Calculation of Fluxes	57
5.4	Indirect Calculation of Fluxes: Bulk Formulas	58
5.5	Global Data Sets for Fluxes	61
5.6	Geographic Distribution of Terms	65
5.7	Meridional Heat Transport	68
5.8	Meridional Fresh Water Transport	70
5.9	Variations in Solar Constant	70
5.10	Important Concepts	73
6	Temperature, Salinity, and Density	75
6.1	Definition of Salinity	75
6.2	Definition of Temperature	78
6.3	Geographical Distribution	79
6.4	The Oceanic Mixed Layer and Thermocline	81
6.5	Density	85
6.6	Measurement of Temperature	89
6.7	Measurement of Conductivity	94
6.8	Measurement of Pressure	95
6.9	Temperature and Salinity With Depth	96
6.10	Light in the Ocean and Absorption of Light	98
6.11	Important Concepts	102
7	The Equations of Motion	105
7.1	Dominant Forces for Ocean Dynamics	105
7.2	Coordinate System	106
7.3	Types of Flow in the ocean	107
7.4	Conservation of Mass and Salt	108
7.5	The Total Derivative (D/Dt)	109
7.6	Momentum Equation	110
7.7	Conservation of Mass: The Continuity Equation	113
7.8	Solutions to the Equations of Motion	115
7.9	Important Concepts	116
8	Equations of Motion With Viscosity	117
8.1	The Influence of Viscosity	117
8.2	Turbulence	118
8.3	Calculation of Reynolds Stress:	121
8.4	Stability	125
8.5	Mixing in the Ocean	129
8.6	Important Concepts	134

9	Response of the Upper Ocean to Winds	135
9.1	Inertial Motion	135
9.2	Ekman Layer at the Sea Surface	137
9.3	Ekman Mass Transports	146
9.4	Application of Ekman Theory	147
9.5	Important Concepts	150
10	Geostrophic Currents	153
10.1	Hydrostatic Equilibrium	153
10.2	Geostrophic Equations	155
10.3	Surface Geostrophic Currents From Altimetry	157
10.4	Geostrophic Currents From Hydrography	160
10.5	An Example Using Hydrographic Data	165
10.6	Comments on Geostrophic Currents	166
10.7	Currents From Hydrographic Sections	172
10.8	Lagrangian Measurements of Currents	174
10.9	Eulerian Measurements	181
10.10	Important Concepts	183
11	Wind Driven Ocean Circulation	185
11.1	Sverdrup's Theory of the Oceanic Circulation	185
11.2	Western Boundary Currents	191
11.3	Munk's Solution	192
11.4	Observed Circulation in the Atlantic	194
11.5	Important Concepts	200
12	Vorticity in the Ocean	201
12.1	Definitions of Vorticity	201
12.2	Conservation of Vorticity	204
12.3	Vorticity and Ekman Pumping	207
12.4	Important Concepts	212
13	Deep Circulation in the Ocean	213
13.1	Importance of the Thermohaline Circulation	214
13.2	Theory for the Thermohaline Circulation	218
13.3	Observations of the Deep Circulation	223
13.4	Antarctic Circumpolar Current	230
13.5	Important Concepts	233
14	Equatorial Processes	235
14.1	Equatorial Processes	236
14.2	El Niño	240
14.3	El Niño Teleconnections	249
14.4	Observing El Niño	250
14.5	Forecasting El Niño	252
14.6	Important Concepts	254

15 Numerical Models	255
15.1 Introduction—Some Words of Caution	255
15.2 Numerical Models in Oceanography	257
15.3 Simulation Models	257
15.4 Primitive-Equation Models	258
15.5 Coastal Models	262
15.6 Assimilation Models	266
15.7 Coupled Ocean and Atmosphere Models	269
15.8 Important Concepts	271
16 Ocean Waves	273
16.1 Linear Theory of Ocean Surface Waves	273
16.2 Nonlinear waves	278
16.3 Waves and the Concept of a Wave Spectrum	279
16.4 Ocean-Wave Spectra	285
16.5 Wave Forecasting	290
16.6 Measurement of Waves	291
16.7 Important Concepts	293
17 Coastal Processes and Tides	295
17.1 Shoaling Waves and Coastal Processes	295
17.2 Tsunamis	299
17.3 Storm Surges	301
17.4 Theory of Ocean Tides	302
17.5 Tidal Prediction	310
17.6 Important Concepts	314
References	317

Preface

This book is written for upper-division undergraduates and new graduate students in meteorology, ocean engineering, and oceanography. Because these students have a diverse background, I have emphasized ideas and concepts with a minimum of mathematical material.

Acknowledgements

I have taught from the book for several years, and I thank the many students who have pointed out poorly written sections, conflicting notation, and other errors. I also thank Professor Fred Schlemmer at Texas A&M Galveston who, after using the book for his classes, has provided extensive comments about the material.

Of course, I accept responsibility for all mistakes in the book. Please send me your comments and suggestions for improvement.

Figures in the book came from many sources. I particularly wish to thank Link Ji for many global maps, and colleagues at the University of Texas Center for Space Research. Don Johnson redrew many figures and turned sketches into figures. Trey Morris tagged the words used in the index.

I especially thank NASA's Jet Propulsion Laboratory and the Topex/Poseidon Project for their support of the book through contract 960887 and 1205046.

Cover photograph of an island in the Maldives was taken by Jagdish Agara (copyright Corbis). Cover design is by Don Johnson.

The book was produced in LaTeX 2e using Textures on a Macintosh computer. Figures were drawn in Adobe Illustrator.
